

Climate Declaration

We believe that the increase in Greenhouse gas emissions generated by the extraction and burning of fossil fuels and deforestation have directly led to the warming of the earth's climate. We believe that if these activities are not dramatically reduced the world faces a rise in global temperatures that will lead to catastrophic consequences for the planet's natural ecosystem and its ability to sustain the growing human population. We also believe that the transition to a net zero emission global economy must be a just and fair transition and go hand in hand with ensuring a more sustainable and equitable society for all.
